

GRINDING - ONSITE MACHINING

Working in a Tight Area on a Large Ship

Slip rings on this 1,000' ore carrier had severely worn.

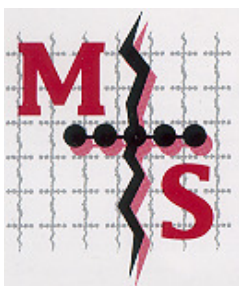

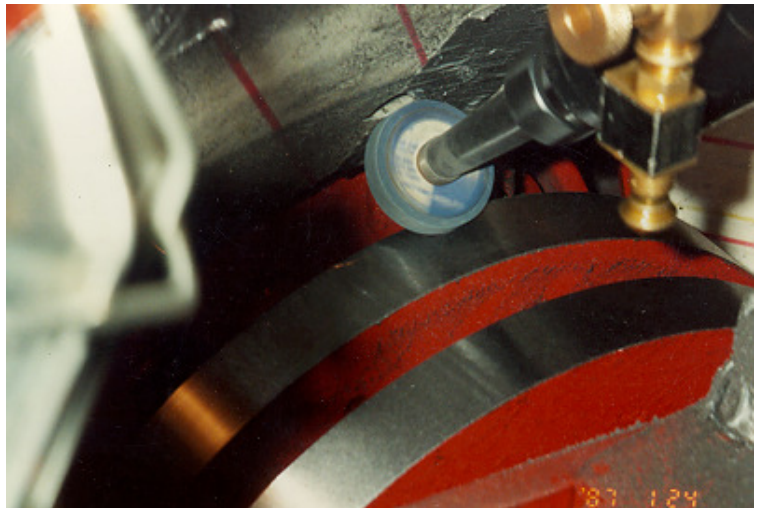

Grinding - Metal Surgery has the portable equipment to machine shafts without rotation, perform flange facing work, boring, line boring, milling keyway cutting, pipe cutting, grinding and honing. Highly skilled crews travel anywhere in the world with specialized tools and equipment to marine or land-based sights.

THE PROBLEM The physical working area was so severely restricted that Metal Surgery had to design a special machine to grind the rings in place eliminating complete disassembly.

THE FIX AND THE PROBLEM

The operation prevented pulling the generator out of position, saving the owners thousands of dollars.
